

Expanding access to da Vinci surgery with a pay-per-use model

Accelerated MIS program (AMP)

What if your hospital could reach its full potential without significant upfront costs and have unfettered access to premium robotic system technology? Now you can. AMP by Intuitive is a pay-per-use, flexible acquisition model for hospitals and health systems with tightening capital budgets. It addresses access barriers and legacy investing habits—those individual, incremental purchases that bump your healthcare organization into expenditure ceilings and technology obsolescence that can limit growth.

With AMP, you can operationalize advanced technology and avoid capital outlay, with the goal of enabling immediate growth and maximizing revenue.

AMP is a customizable approach for da Vinci® surgical systems that combines the system cost, service, and interest into a per-procedure operational fee with a lifetime or annual cap.

Contact your Intuitive representative for more information.

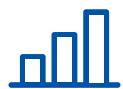

Unlock the potential of your robotics service line

Operationalize technology without capital outlay

Provide expanded and ongoing access to the latest technology

With the goal of driving growth, revenue, and long-term profitability

64%

Of customers choose customized financing with Intuitive to deploy our latest robotic technology¹

100+

Global health systems are under an AMP agreement²

300K+

Procedures to-date performed under the AMP model²

95%

Of customers are meeting contractual targets³

1. Data on file with Intuitive, as of 2022 U.S. only
2. To be able to continue using a da Vinci or Ion system under the AMP, customers who don't meet their utilization goals agree to meet remediation targets in the upcoming quarter.
3. Data on file with Intuitive, as of Q1 2023

Da Vinci Xi/X system precaution statement

The demonstration of safety and effectiveness for the representative specific procedures did not include evaluation of outcomes related to the treatment of cancer (overall survival, disease-free survival, local recurrence) or treatment of the patient's underlying disease/condition. Device usage in all surgical procedures should be guided by the clinical judgment of an adequately trained surgeon.
